

# Environmental policy

Being aware of its ecological responsibility, **Nemak Győr** is committed to the environmental protection, therefore, attempts to continuously mitigate the effects on the environment, to implement reasonable utilization of resources and to establish and develop the environmental conscious thinking.

**Nemak Győr**, as a part of an international concern, deals with producing auto spares (casting, machining). Our environmental protection policy and strategy supports the Global HSE Policy of **Nemak Group**.

Environmental protection is integrated into our working processes, all of these are performed through an environment-focused management system established and operated according to the requirements of the EN ISO 14001:2015 standard. We develop our EMS continuously, in order to increase our environmental performance.

By this we contribute to the competitiveness and economic successfulness of our company. Consequently, objectives of our environmental protection activity are the following:

- Technology applied in the course of manufacturing our products was established according to the customer requirements and environmental protection regulations, including the 'best available technology'.
- The environmental risks and effects are identified, as far as possible are mitigated and controlled, in order to save the environment and avoid pollution.
- We attempt to minimize the harmful environmental effects of our activity, especially to minimize the quantity of generated waste materials; to enlarge the rate of reuse, and decrease the quantity of the greenhouse gases.
- In line with international processes and in accordance with Nemak's global commitment, we have set a target to reduce the company's carbon footprint by 2030 as planned. Our ultimate goal is to achieve carbon-neutral operation by 2050.
- Our company is committed to meet the requirements of environmental protection legislation, authority regulation, standard regulations and other requirements undertaken.
- We attempt to create such an approach and culture in our employees that are based on respect and attention to each other and to the environment.
